

EASY INVENTORY

Inventory Tracking System...

Easy Inventory was designed for companies and organisations to handle their various inventory tracking needs, such as supplies and parts.

Easy Inventory can **RECEIVE** items from Vendors into a Central Warehouse and **SHIP** or **ISSUE** items to Clients, Departments, Branches, etc.

MAIN SCREEN

Inventory items can be added to the database by pressing the Add button and entering the P/N and descriptions with costs. This field can be used to establish an initial Quantity on hand and Unit of measure.

RECEIVE SCREEN

Items are Received from Vendors and Returned to vendors on this screen.

ISSUE SCREEN

Items are Shipped or Issued to clients, branches, etc and returned from Branches to give credit for the item on this screen

This system works with barcodes. A future feature will be using a portable Barcode reader for scanning transactions like issue, receiving and physical inventory for stocking purposes.
