

PlenaFill® Blanking Panels 27U Scalable Blanking Panel

Blanking unused rack space is a vital component of an effective airflow management program.

By sealing unused rack space it prevents hot exhaust air from circulating back to the front of the rack and mixing with cold air at the air intakes. PlenaFill® provides a flexible and efficient means to sealing these gaps.

- PlenaFill® is supplied in boxes of 10 x 27U sheets that are scored at 1U intervals.
- No more guessing how many blanking panels are required, simply tear off the required amount.
- Quickly blank off large areas of unused rack space.
- Panels held in place with fixing rivets (ordered separately).
- Panels and rivets can be reused in other racks when equipment is installed.
- Fire rated material (ULV0 Class 94) that can be cut for spaces less than 1U.
- Available for 19" & 23" Racks.
- PlenaFill® blanking panels are available from stock in dark grey or white.
