## FUSION SPLICING FIBRE PREPARATION TOOL KIT

## PRODUCT OVERVIEW

### Application

Fujikura STK-04 is a compact fibre preparation tool kit for use when fusion splicing.

It contains all the required tools for accessing and cleaning optical fibres prior to cleaving and splicing. It has been designed so that it fits neatly in the storage compartment of the Fujikura fusion splicer carry case.

Part Number	Description
FCC2-00-0903	Fibre cleaning fluid. Non-flammable, non-hazardous, fast drying optical cleaning fluid. 85g with 3-way dispensing pump/spray
9000-03-0026MZ	Lint free fibre wipes. Mini-tub with 90 perforated pop-up sheets of 50mm x 105mm
E70-5001	Cable ringing tool. High quality tool for slitting and ringing the outer sheath of round cables of 4.5mm to 25mm diameter
KEV-01	Kevlar scissors. For clean, easy cutting of inner Kevlar stranding
LTC-01	Loose tube cutters. High quality Fujikura tool for safe removal of outer tubing without damaging the optical fibres within
SS03	Fujikura Tri-hole strippers. Single tool for removing both 250um and 900um outer coating and 2-3mm jacket
STOOL-1200	Lint free miniature cotton buds. These are perfect for cleaning the critical components of fusion splicers, in conjunction with the cleaning fluid
Carry Case	Padded carry case made of hard wearing Cordura fabric
