

# HD3 IPAD CHARGING CABINET

## CHARGING CABINET FOR APPLE IPADS OR ANDROID TABLETS

### Application

EDP Europe's HD3 Apple iPad Charging Cabinet is a flexible iPad or Android Tablet charging rack that is a perfect solution for charging multiple devices.

With the increasing use of Apple iPads and Android Tablets within the Educational sector finding a secure solution in which to manage and charge these high-value assets is vital.

The HD3 iPad Charging Cabinet enables up to 80 iPads or Android Tablets to be charged at one time within an enclosed cabinet that provides central management. Lockable double doors provide security for the devices, with the option for enhanced cabinet security available via a rack access control system. Acrylic inset doors provide visual monitoring of charging devices, while vents on each shelf and at the top of each side panel enables natural ventilation of any hot air built up during charging.

Each shelf is fitted with two cradles that each hold 10 iPads or Tablets, power is then supplied via USB cables with the required Lightning or Micro USB connectors. With power supplied and managed within the cabinet the charging cabinet requires just a single power outlet into which it plugs in.

Custom-designed solutions for fewer or more devices can be produced and can incorporate different colours or corporate branding.

### PRODUCT OVERVIEW

### Features & Benefits

- Fully welded construction for durability, with quick release door swing door handle and options for enhanced security.
- Inset shatterproof acrylic window for easy viewing of charging devices.
- Rear mounted power bar for better cable management, with PSUs consolidated and secured at the rear of the shelves.
- Ventilated shelves and top vents on side panels enable natural ventilation of hot air produced during charging.
- Custom colour finishes and branding available.
- Charge 80 iPads or Android Tablets at one time.
